

Fully Automatic Cable Tie Installation Systems

Fully automatic cable tie installation systems offer a complete single-source solution for high volume harnessing, assembly, fastening, and packaging applications. With cycle times of less than one second, the systems are up to six times faster than conventional manual cable tie installations. The microprocessor based controller monitors system performance for improved production and reliability. Physical connection of Panduit cable tie installation systems to Ethernet networks is available via an RJ45 connection to facilitate data analysis and troubleshooting. For harnessing applications that also require mounting capability, the system also features innovative push barb cable tie mounts and harness board fixtures. This bundling and mounting system saves time by automatically feeding the cable tie through the mount, tensioning and cutting flush, all in one easy step for consistent results. For robotic applications, Panduit offers an integration kit for optimal cable tie installation in a completely automated manufacturing process. These innovative solutions, along with our full line of wiring and communication products, allow Panduit to offer its customers the ideal automated bundling and mounting solution for their applications.
