

## PROGRAMMABLE CURRENT SENSING HIGH SIDE SWITCH

### Features

- Load current feedback
- Programmable over current shutdown
- Active clamp
- E.S.D protection
- Input referenced to Vcc
- Over temperature shutdown
- Reverse battery protection

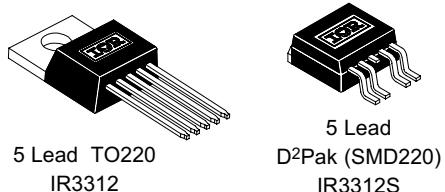

### Description

The IR 3312(S) is a Fully Protected 4 terminal high side switch. The input signal is referenced to Vcc. When the input voltage Vcc - Vin is higher than the specified Vih threshold, the output power MOSFET is turned-on. When Vcc - Vin is lower than the specified Vil threshold, the output MOSFET is turned-off. A sense current proportional to the current in the power Mosfet is sourced to the Ifb pin. Over-current shutdown occurs when Vifb - Vin > 4.5 V. The current shutdown threshold is adjusted by selecting the proper RIfb. Either over-current and over-temperature latches off the switch. The device is reset by pulling the input pin high. Other integrated protections ( ESD, reverse battery, active clamp ) make the IR3312(S) very rugged and suitable for the automotive environment.

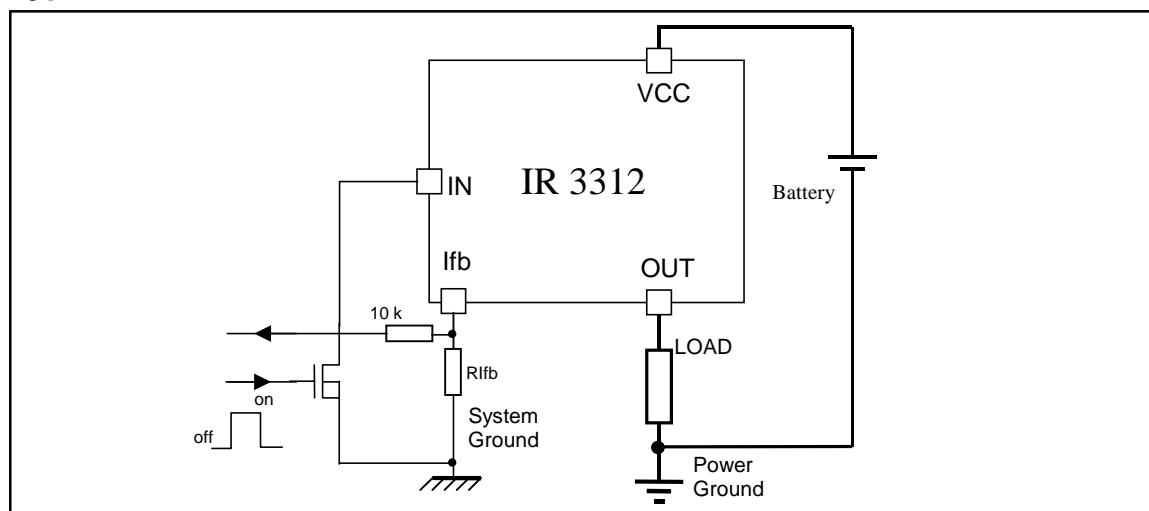

### Product Summary

|               |          |
|---------------|----------|
| Rds(on)       | 20mΩ     |
| Vcc.op.       | 6 to 28V |
| Current ratio | 2800     |
| Ishutdown     | 3 to 30A |
| Active clamp  | 35V      |
| Load Dump     | 40V      |

### Package

### Typical Connection

### Absolute Maximum Ratings

Absolute maximum ratings indicate sustained limits beyond which damage to the device may occur. All voltage parameters are referenced to Vcc lead. (TAmbient = 25°C unless otherwise specified).

| Symbol          | Parameter   | Min. | Max. | Units |
|-----------------|---|------|------|-------|
| Vcc - Vin max   | Maximum input voltage   | -16  | 50   | V     |
| Vcc-VIfb max    | Maximum Ifb voltage   | -0.3 | 50   |       |
| Vcc - Vout max. | Maximum output voltage  | -0.3 | 33   |       |
| Ids cont.       | Diode max. permanent current (Rth = 60 °C/W) (1)              | —    | 2.8  | A     |
| Ids1 cont       | Diode max. permanent current (Rth = 5 °C/W) (1)               | —    | 25   |       |
| Ids pulsed      | Diode max. pulsed current (1)                                 | —    | 100  |       |
| ESD 1           | Electrostatic discharge ( human body model )C=100pF, R=1500Ω, | —    | 4    | kV    |
| ESD 2           | Electrostatic discharge (machine model)C=200pF,R=0Ω, L=10µH   | —    | 0.5  |       |
| Pd              | Power dissipation ( Rth = 60 °C/W )                           | —    | 2    | W     |
| TJ max.         | Max. storage and junction temperature                         | -40  | 150  | °C    |
| Min RIfb        | Minimum resistor on the Ifb pin                               | 0.3  | —    | kΩ    |
| Ifb max         | Max. Ifb current  | -20  | +20  | mA    |

### Thermal Characteristics

| Symbol | Parameter  | Typ. | Max. | Units |
|--------|--|------|------|-------|
| Rth 1  | Thermal resistance junction to Ambient - TO220       | 60   | —    | °C/W  |
| Rth 2  | Thermal resistance junction to case - TO220          | 0.7  | —    |       |
| Rth 1  | Thermal resistance with standard footprint - SMD220  | 60   | —    |       |
| Rth 2  | Thermal resistance with 1" square footprint - SMD220 | 35   | —    |       |
| Rth 3  | Thermal resistance junction to case - SMD220         | 0.7  | —    |       |

### Recommended Operating Conditions

These values are given for a quick design. For operation outside these conditions, please consult the application notes.

| Symbol         | Parameter  | Min. | Max. | Units |
|----------------|--|------|------|-------|
| Vcc - Vin      | Continuous input voltage                                   | 6    | 28   | V     |
| Vcc - VIfb     | Continuous Ifb pin voltage                                 | 0.3  | 28   |       |
| Vcc            | Supply to power ground voltage                             | 6    | 28   |       |
| Iout           | Continuous output current ( Rth/amb < 5 °C/W, Tj = 125°C)  | —    | 14   | A     |
| Iout 85°C amb. | Continuous output current ( Rth/amb < 60 °C/W, Tj = 125°C) | —    | 3.9  |       |
| RIfb           | Ifb resistor to program Ids and scale (2 & 3)              | 0.5  | 3.5  |       |
| Pulse min.     | Minimum turn-on pulse width                                | 1    | —    | ms    |
| Fmax           | Maximum operating frequency                                | —    | 500  | Hz    |
| Fmax Prot.     | Maximum frequency with protections activated               | —    | 200  |       |

1) Limited by junction temperature. Pulsed current is also limited by wiring

2) <500 Ohm or shorting Ifb to gnd may damage the part with Ids around 37A

3) >5000 Ohm or leaving Ifb open will shutdown the part. No current will flow in the load.

### Protection Characteristics

$T_j = 25^\circ\text{C}$  (unless otherwise specified),  $R_{Ifb} = 500$  to  $5\text{k}\Omega$ .

| Symbol                           | Parameter                               | Min. | Typ. | Max. | Units | Test Conditions                                    |
|----------------------------------|---|------|------|------|-------|--|
| $V_{Ifb} - V_{in}$<br>@ $I_{sd}$ | Over-current shutdown threshold         | 4    | 4.5  | 5.4  | V     |  |
| $T_{sd}$                         | Over-temp. shutdown threshold           | —    | 165  | —    | °C    | see Fig. 7   |
| $T_{reset}$                      | Protection reset time                   | —    | 50   | 300  | μs    | see Fig. 7   |
| $OV$                             | Over voltage shutdown (not latched)     | 33   | 36   | 41   | V     |  |
| $I_{sd\_\_1k}$                   | Fixed over current shutdown             | 30   | 37   | 45   | A     | $V_{Ifb} < V_{in}$                                 |
| $I_{sd\_1k}$                     | Adjustable over current shutdown 1K     | 9    | 12   | 16   | A     | $R_{Ifb}=1\text{k}$                                |
| $Min.\text{Pulse}$               | Minimum pulse width (no WAIT state)     | 200  | 500  | 1200 | μs    | see Fig. 6   |
| $WAIT$                           | WAIT function timer                     | 0.5  | 1.2  | 3.5  | ms    | see Figs. 6 and 7                                  |
| $Rev.R_{ds\_\_on}$               | $R_{ds(on)}$ reverse battery protection | 10   | 16   | 28   | mΩ    | $V_{cc}-V_{in}=-12\text{V}$ , $I_{load}=5\text{A}$ |

### Static Electrical Characteristics

( $T_j = 25^\circ\text{C}$ ,  $V_{cc} = 14\text{V}$  unless otherwise specified.)

| Symbol          | Parameter                                      | Min. | Typ. | Max. | Units | Test Conditions  |

### Switching Electrical Characteristics

$V_{cc} = 14\text{V}$ , Resistive Load =  $0.4\Omega$ ,  $T_j = 25^\circ\text{C}$ , (unless otherwise specified).

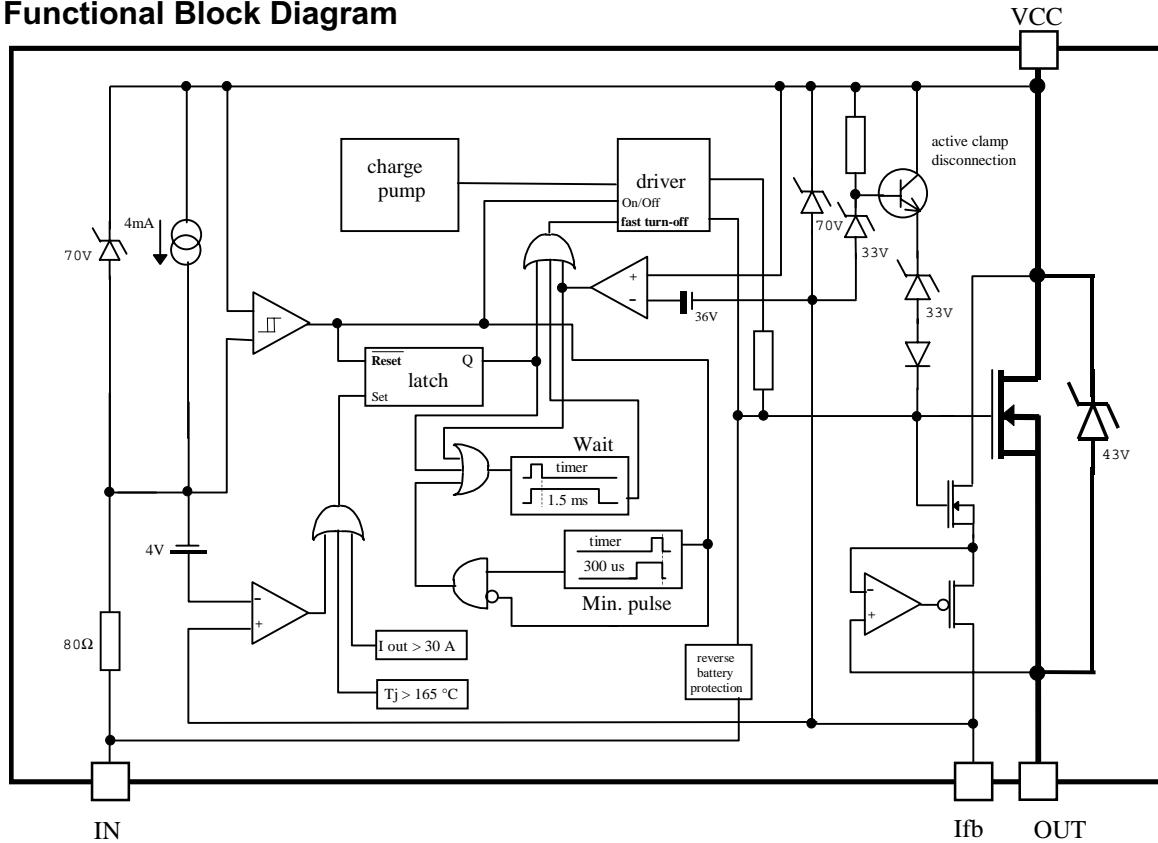

| Symbol     | Parameter   | Min. | Typ. | Max. | Units | Test Conditions |
|------------|---|------|------|------|-------|-----------------|
| $T_{don}$  | Turn-on delay time to $V_{cc}-V_{out}=0.9\text{V}_{cc}$ | 2    | 9    | 20   | μs    | see figure 2    |
| $T_{r1}$   | Rise time to $V_{cc}-V_{out}=5\text{V}$                 | 0.2  | 1    | 5    |       |                 |
| $T_{r2}$   | Rise time to $V_{cc}-V_{out}=0.1\text{V}_{cc}$          | 5    | 15   | 60   |       |                 |
| $E_{on}$   | Turn ON energy  | —    | 0.75 | 1.5  | mJ    | see figure 3    |
| $T_{doff}$ | Turn-off delay to $V_{cc}-V_{out}=0.1\text{V}_{cc}$     | 5    | 14   | 60   |       |                 |
| $T_f$      | Fall time to $V_{cc}-V_{out}=0.9\text{V}_{cc}$          | 2    | 7    | 25   | μs    |                 |
| $E_{off}$  | Turn OFF energy   | —    | 0.5  | 1    | mJ    |                 |

4) Input thresholds are measured directly between the input pin and the tab. Any parasitic resistance in common between the load current path and the input signal path can significantly affect the thresholds.

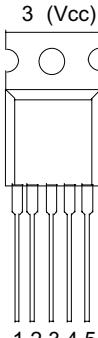

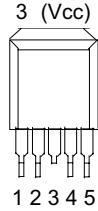

5)  $R_{ds(on)}$  is measured between the Tab and the Out pin, 5mm away from the package.

**Current Sense Characteristics**

| Symbol   | Parameter                            | Min.  | Typ.  | Max.  | Units | Test Conditions  |
